- 1. The building construction for the roller—bearing reactory (Gordulo Campagygyar) which was commenced last year has not been continued this year, since the walls of the building had sunk due to the sandy sub-soil. The building itself is not being dismantled because of the anticipated danger to life.
- 2. This year the factory received from the Soviet Union one 1,200-ton horisontal forging machine (Visssintes Kevdesolo Gep). The production capacity of this machine during one shift is 600 large-size bearings (Magyadretti Csapagy). 25X1 The dismeter of the largest bearing produced is 20 to 25 cm.
- 3. The site of the factory is to the right of the Debrecen Nyiregyhasa (Kassai utca) road and the railroad parallel to it, as one travels northeast.

  It is to the south of some Hungarian army barracks.
